OPEN ACCESS FOR OPEN SCIENCE

# FIRMS Global and FIRMS US/Canada

- <https://firms.modaps.eosdis.nasa.gov>
- NRT and RT imagery and fire remote sensing products for the world.
- Developed by U of Maryland in early 2000s and used data from MODIS Rapid Response.
- Transitioned to NASA LANCE in 2012.

- <https://firms.modaps.eosdis.nasa.gov/usfs>
- Partnership between NASA and USDA Forest Service
- FIRMS US/Canada was launched within NASA LANCE in 2021.
- NRT, RT and URT imagery and fire remote sensing products for the US & Canada.
- Provides contextual data/information relevant to fire management.

# FIRMS

## Components

# Satellite Active Fire Detection Data Used in FIRMS

Active Fire and Thermal Anomalies Data				
Sensor (Platform)	Source	Spatial Resolution	Temporal Resolution	Latency <sup>4</sup> (Coverage)
ABI (GOES-16 & 18)	NOAA	2km sub-satellite <sup>1</sup>	Sub-hourly	RT - ~20-30 mins (Americas)
ABI (GOES-16 & 18)	KCL/IPMA	2km sub-satellite <sup>1</sup>	Sub-hourly	RT - ~20-30 mins (Americas)
SEVIRI (Meteosat 9 & 11)	EUMETSAT/LSA SAF	3km sub-satellite <sup>1</sup>	Sub-hourly	RT - ~30 mins (Europe-Africa-India)
AHI (Himawari-8)	KCL/IPMA	2km sub-satellite <sup>1</sup>	Sub-hourly	RT - ~30 mins (Australia-Asia)
MODIS (Terra/Aqua)	NASA LANCE	1km sub-satellite <sup>1</sup>	Twice daily <sup>2</sup>	NRT - <3 hours (Global)
VIIRS (Suomi NPP/NOAA-20/21)	NASA LANCE	375m sub-satellite <sup>1</sup>	Twice daily <sup>2</sup>	NRT - <3 hours (Global)
MODIS (Aqua)	SSEC Univ of Wisconsin	1km sub-satellite <sup>1</sup>	Twice daily <sup>2</sup>	RT - <30 mins (US-Canada)
VIIRS (Suomi NPP/NOAA-20/21)	SSEC Univ of Wisconsin	375m sub-satellite <sup>1</sup>	Twice daily <sup>2</sup>	RT - <30 mins (US-Canada)
MODIS (Aqua)	SSEC Univ of Wisconsin	1km sub-satellite <sup>1</sup>	Twice daily <sup>2</sup>	URT - <1 min (US-Canada)
VIIRS (Suomi NPP/NOAA-20/21)	SSEC Univ of Wisconsin	375m sub-satellite <sup>1</sup>	Twice daily <sup>2</sup>	URT - <1 min (US-Canada)
OLI (Landsat 8 & 9)	USGS EROS	30m	8 days <sup>3</sup>	RT - <30 mins (US-Canada)

<sup>1</sup> The pixel size systematically grows from sub-satellite towards the edge of the disk/swath.

<sup>2</sup> Thermal data are collected for daytime and nighttime observations ~ 12 hours apart.

<sup>3</sup> L8 and L9 orbit cycles each have 16-day orbit cycles and their orbits are 8 days out of phase. This does not include potential nighttime observations.

<sup>4</sup> Latency refers to the estimated time from satellite observation to availability in FIRMS. Near Real-Time (NRT), Real-Time (RT) & Ultra-Real-Time (URT).

Coverage over US/Canada only

# Recent Enhancements

# FIRMS Map User Interface (UI) Updates

The screenshot displays the FIRMS (Fire Information for Resource Management System) web interface. At the top, the NASA logo and 'FIRMS Fire Information for Resource Management System' are on the left, while 'Quick Search', 'Announcements', and 'Feedback' links are on the right. The main area is a satellite map of the Americas with numerous red dots representing fire events. A yellow box highlights the 'MAIN MAP MENU' on the right side of the map. This menu includes options for 'BASIC MODE', 'ADVANCED MODE', 'BURNED AREA', 'US/CANADA', 'SMOKE / AEROSOLS', 'EXPERIMENTAL IN-PROGRESS', 'FIRE ALERTS', and 'DOWNLOADS'. A text overlay on the map reads 'Available Modes for User Needs and Capabilities'. In the bottom left, a text box lists the 'FIRMS UI Refinement Objectives'. The bottom of the interface features a toolbar with icons for 'MEASURE', 'LOCATION', 'LAYERS', 'TIMELINE', 'CAPTURE', 'SHARE', 'HELP', 'MAXIMIZE', and a close button. The NASA logo is in the bottom right corner.

**Available Modes for User Needs and Capabilities**

**MAIN MAP MENU**

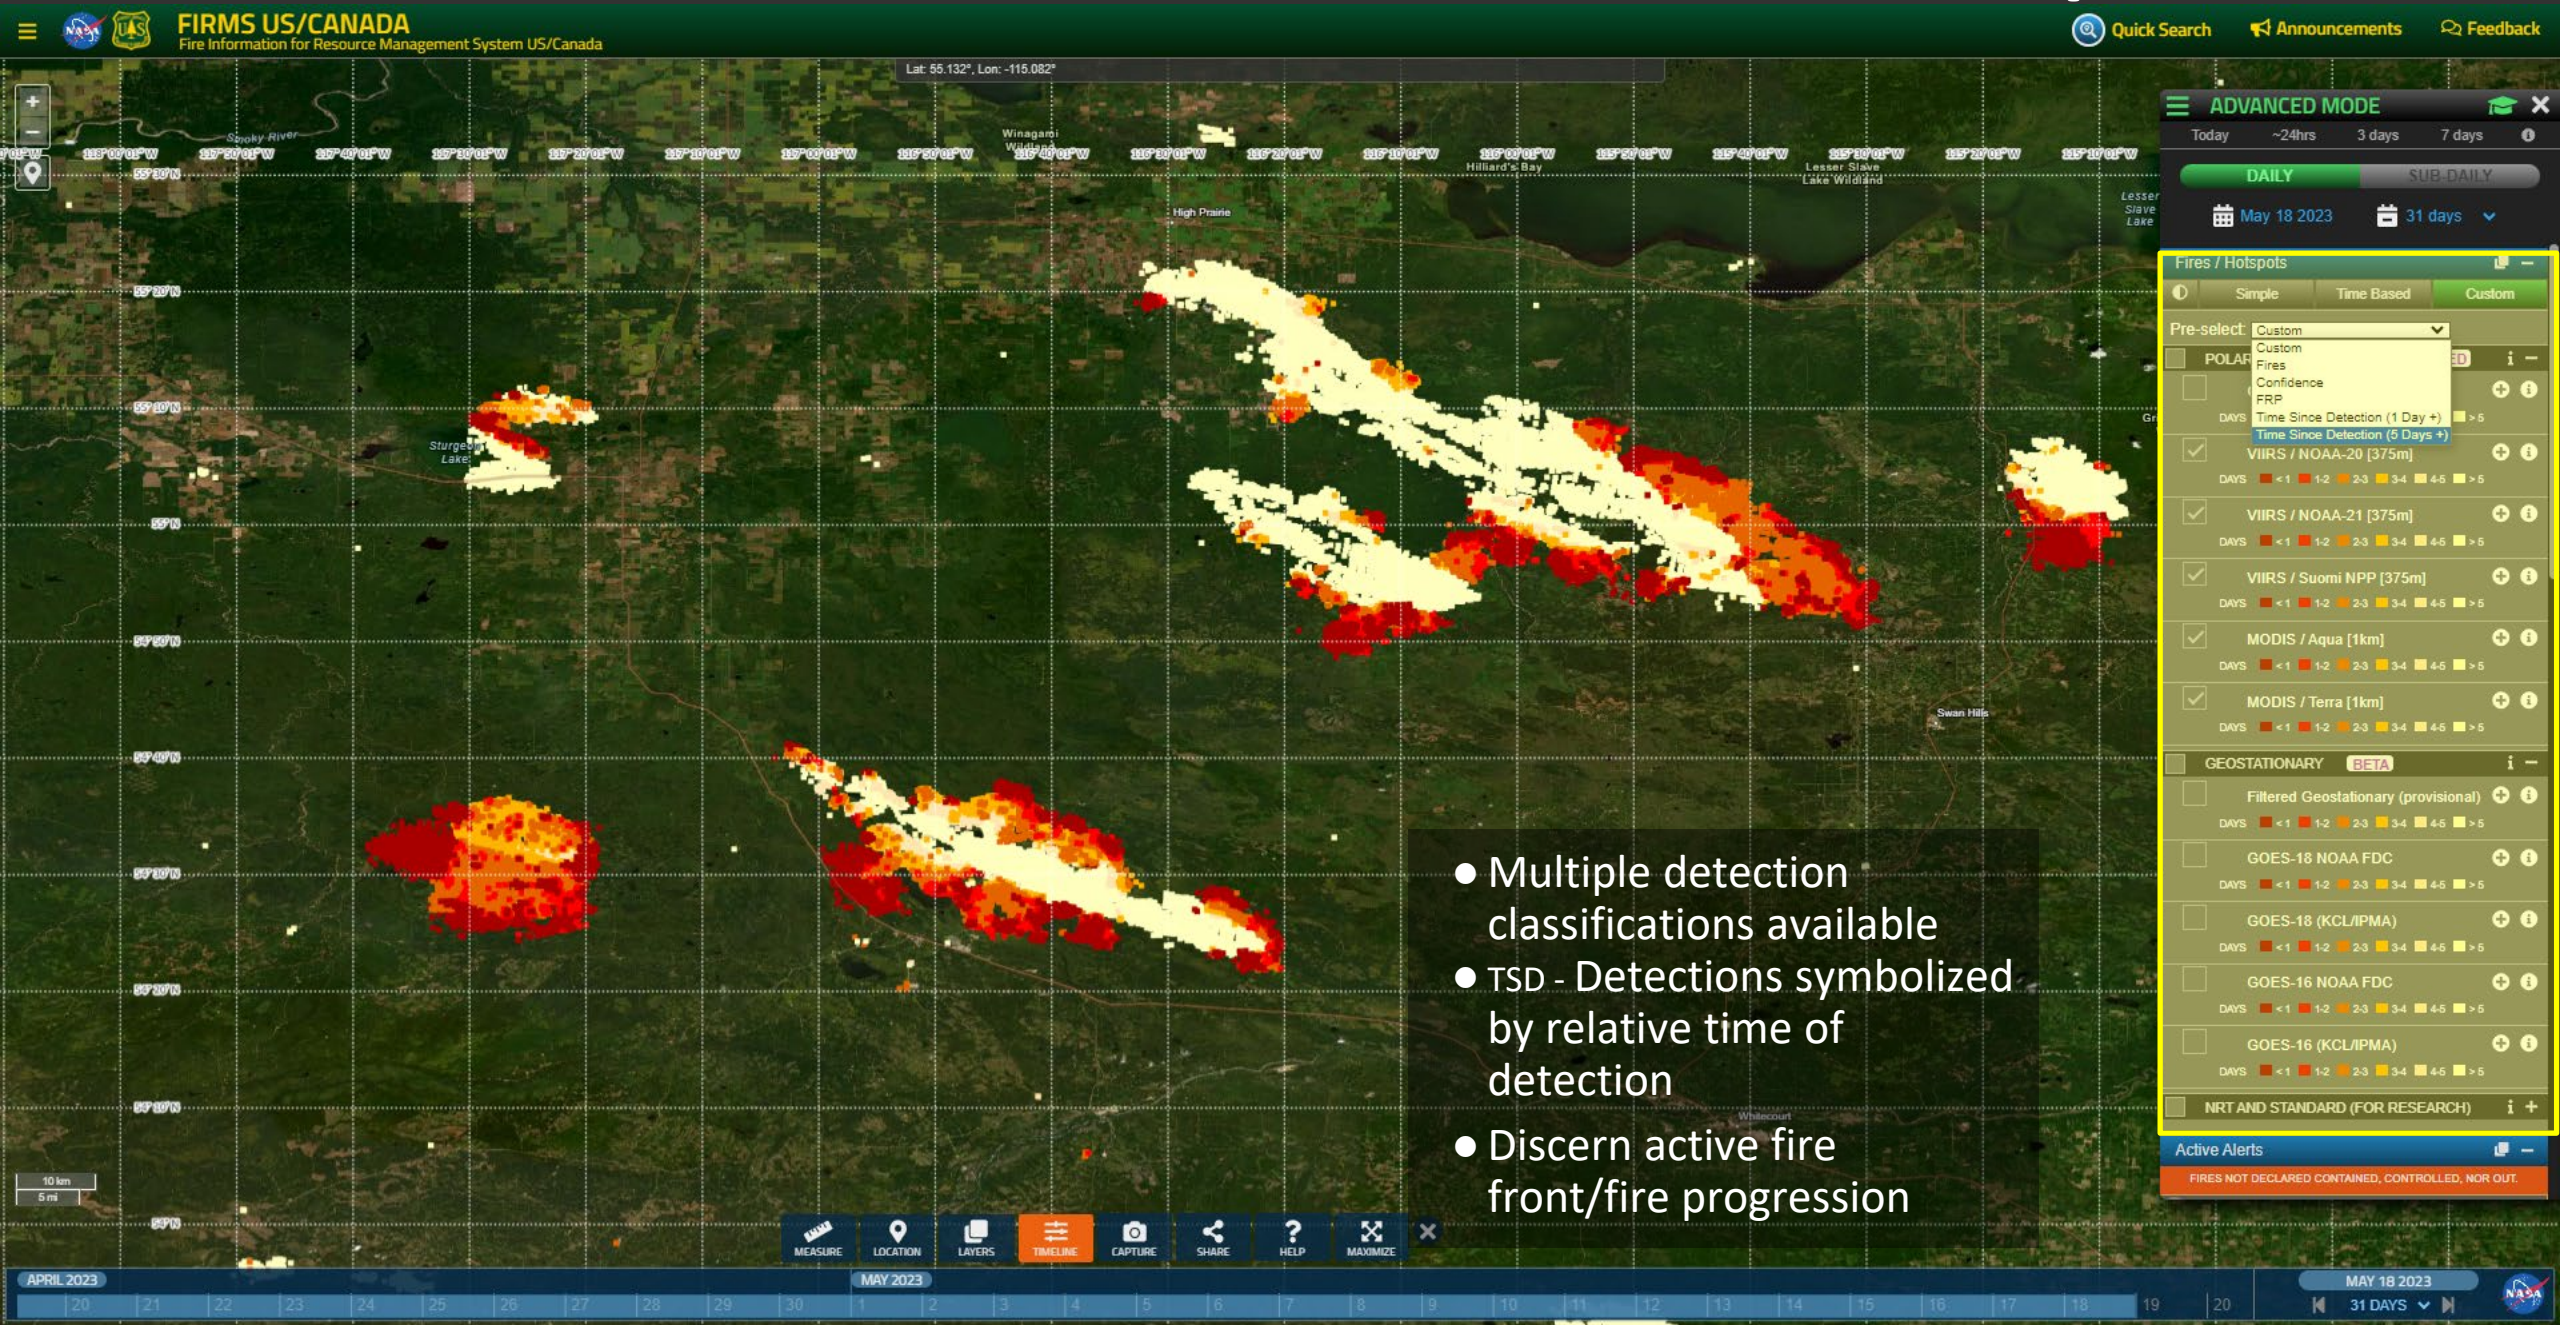

- BASIC MODE
- ADVANCED MODE
- BURNED AREA
- US/CANADA
- SMOKE / AEROSOLS
- EXPERIMENTAL IN-PROGRESS
- FIRE ALERTS
- DOWNLOADS

**FIRMS UI Refinement Objectives:**

- Support an increasingly diverse set of users
- Make more intuitive for users
- Provide easier access to other FIRMS products/services
- Allow greater flexibility to filter/query remote sensing data (sub-daily)
- Provide access to, and maintain separation of, prototype products

# Fire Detection Data Sources & Visualization Options

- Multiple detection classifications available
- TSD - Detections symbolized by relative time of detection
- Discern active fire front/fire progression

## Recently Added to FIRMS

- Volcano layer
- NOAA-21 Active fire/thermal anomalies
- NOAA-21 Corrected Reflectance and Surface Reflectance Imagery
- VIIRS Night-lights imagery (At sensor radiance and Nighttime Blue/Yellow Composite)
- Reginal KMZ data files at the request of Canadian partners

# FIRMS Outreach Activities

---

- Objectives
- Target Audience
- What we learned
- Activities and Next Steps

# Objectives

Inform users about FIRMS data and capabilities

Understand how FIRMS data and capabilities have been used in recent fire seasons

Receive suggestions for enhancements to support operational needs

# FIRMS Outreach Activities

---

- ❑ Objectives
- Target Audience
- ❑ What we learned
- ❑ Activities and Next Steps

# Canada: Provincial/National Government Users

## - Provincial Governments

- Northwest Territories Dept of Environment and Climate Change
- Northwest Territories Forest Management Division
- British Columbia Wildfire Service
- Saskatchewan Public Safety Agency

## - National Government

- Canadian Forest Service, Northern Forestry Centre
- Natural Resources Canada (NRCAN)

Government  
of Canada

Gouvernement  
du Canada

# US: Federal/State Users

- Programs and Applications

- National Interagency Coordination Center
- USFS/Interagency Air Quality Response Program
- USFS Wildland Fire Management Research, Development and Applications
- USFS Rocky Mtn Research Station Fire, Fuel and Smoke Sciences
- USFS Fire & Aviation Management - Tools and Technology
- USFS Fire & Aviation Management - National Infrared Operations
- BLM California Desert Interagency Fire Program
- Minnesota Emergency Preparedness group

Fire, Fuel, and Smoke Science Program  
Missoula Fire Sciences Laboratory

# Private Sector Users

- SCE – Southern California Edison Electricity
- PG&E – Pacific Gas and Electric
- San Diego Gas & Electric
- Indji

# Recent FIRMS Technology Transfer/Training Engagements

- National Interagency Coordination Center (NICC) / Geographic Area Coordination Center (GACC) Intel Group
- CIFFC Geospatial Working Group
- NRCAN Community of Practice for Remote Sensing in Operational Fire Management
- Minnesota Emergency Preparedness Committee
- U of Louisiana at Lafayette Regional Application Center

# FIRMS Outreach Activities

---

- ❑ Objectives
- ❑ Target Audience
- What we learned
- ❑ Activities and Next Steps

## Comments about FIRMS:

- Essential to fire management operations. When not available, can significantly affect operations for some agencies.
- Critical source of intel, particularly when aerial reconnaissance is not possible
- System redundancy is helpful during periods of high demand, load balancing

## Imagery and Active Fire Data Use Cases:

- Monitor new ignitions and ongoing fire activity
- Burned area delineation using Landsat/Sentinel 2 imagery (potential use case)
- Validation of national burned area products using Landsat/Sentinel 2 imagery (potential use case)
- Assess potential risk for new fires/fire growth in context of fire danger data
- Validate fire growth forecasts
- Retrospectively investigate origin of fires and cause
- Brief agency/interagency leadership and develop intel reports
- Monitor infrastructure assets (electricity transmission, renewable energy sources, etc.)
- Support mapping and DSS applications through use of map services, APIs and downloadable data
- Monitor fire activity in other countries for which mutual assistance agreements are maintained

National Interagency Coordination Center Command Center Floor

OPEN ACCESS FOR OPEN SCIENCE

## Requests:

Additional FIRMS training/tech transfer resources

Tools to filter incident location data

NRT VIIRS burned area product

Increased functionality, tools and data for USFS air resource/smoke management needs

Identify sources of persistent/semi-persistent anomalies

Provide more platforms and daily observations to support operational and science activities

Fire, Fuel, and Smoke Science Program  
Missoula Fire Sciences Laboratory

Government  
of Canada

Gouvernement  
du Canada

# LANCE OMPS Aerosol Index

## OMPS Aerosol Index for 11 May 2024

N21 (178 xtrack FOVs)  
10x10 km nadir

S-NPP (36 xtrack FOVs)  
50x50 km nadir

N20 (140 xtrack FOVs)  
12x17 km nadir

# Persistent/Semi-Persistent Anomaly Sources

Identify thermal anomaly locations not attributable to vegetation fires  
- started with the volcano layer (already in FIRMS)

Ongoing review of ~15 global data layers from authoritative sources

Natural features, industrial, energy extraction/processing and mineral extraction/processing facilities, etc.

555,000+ features

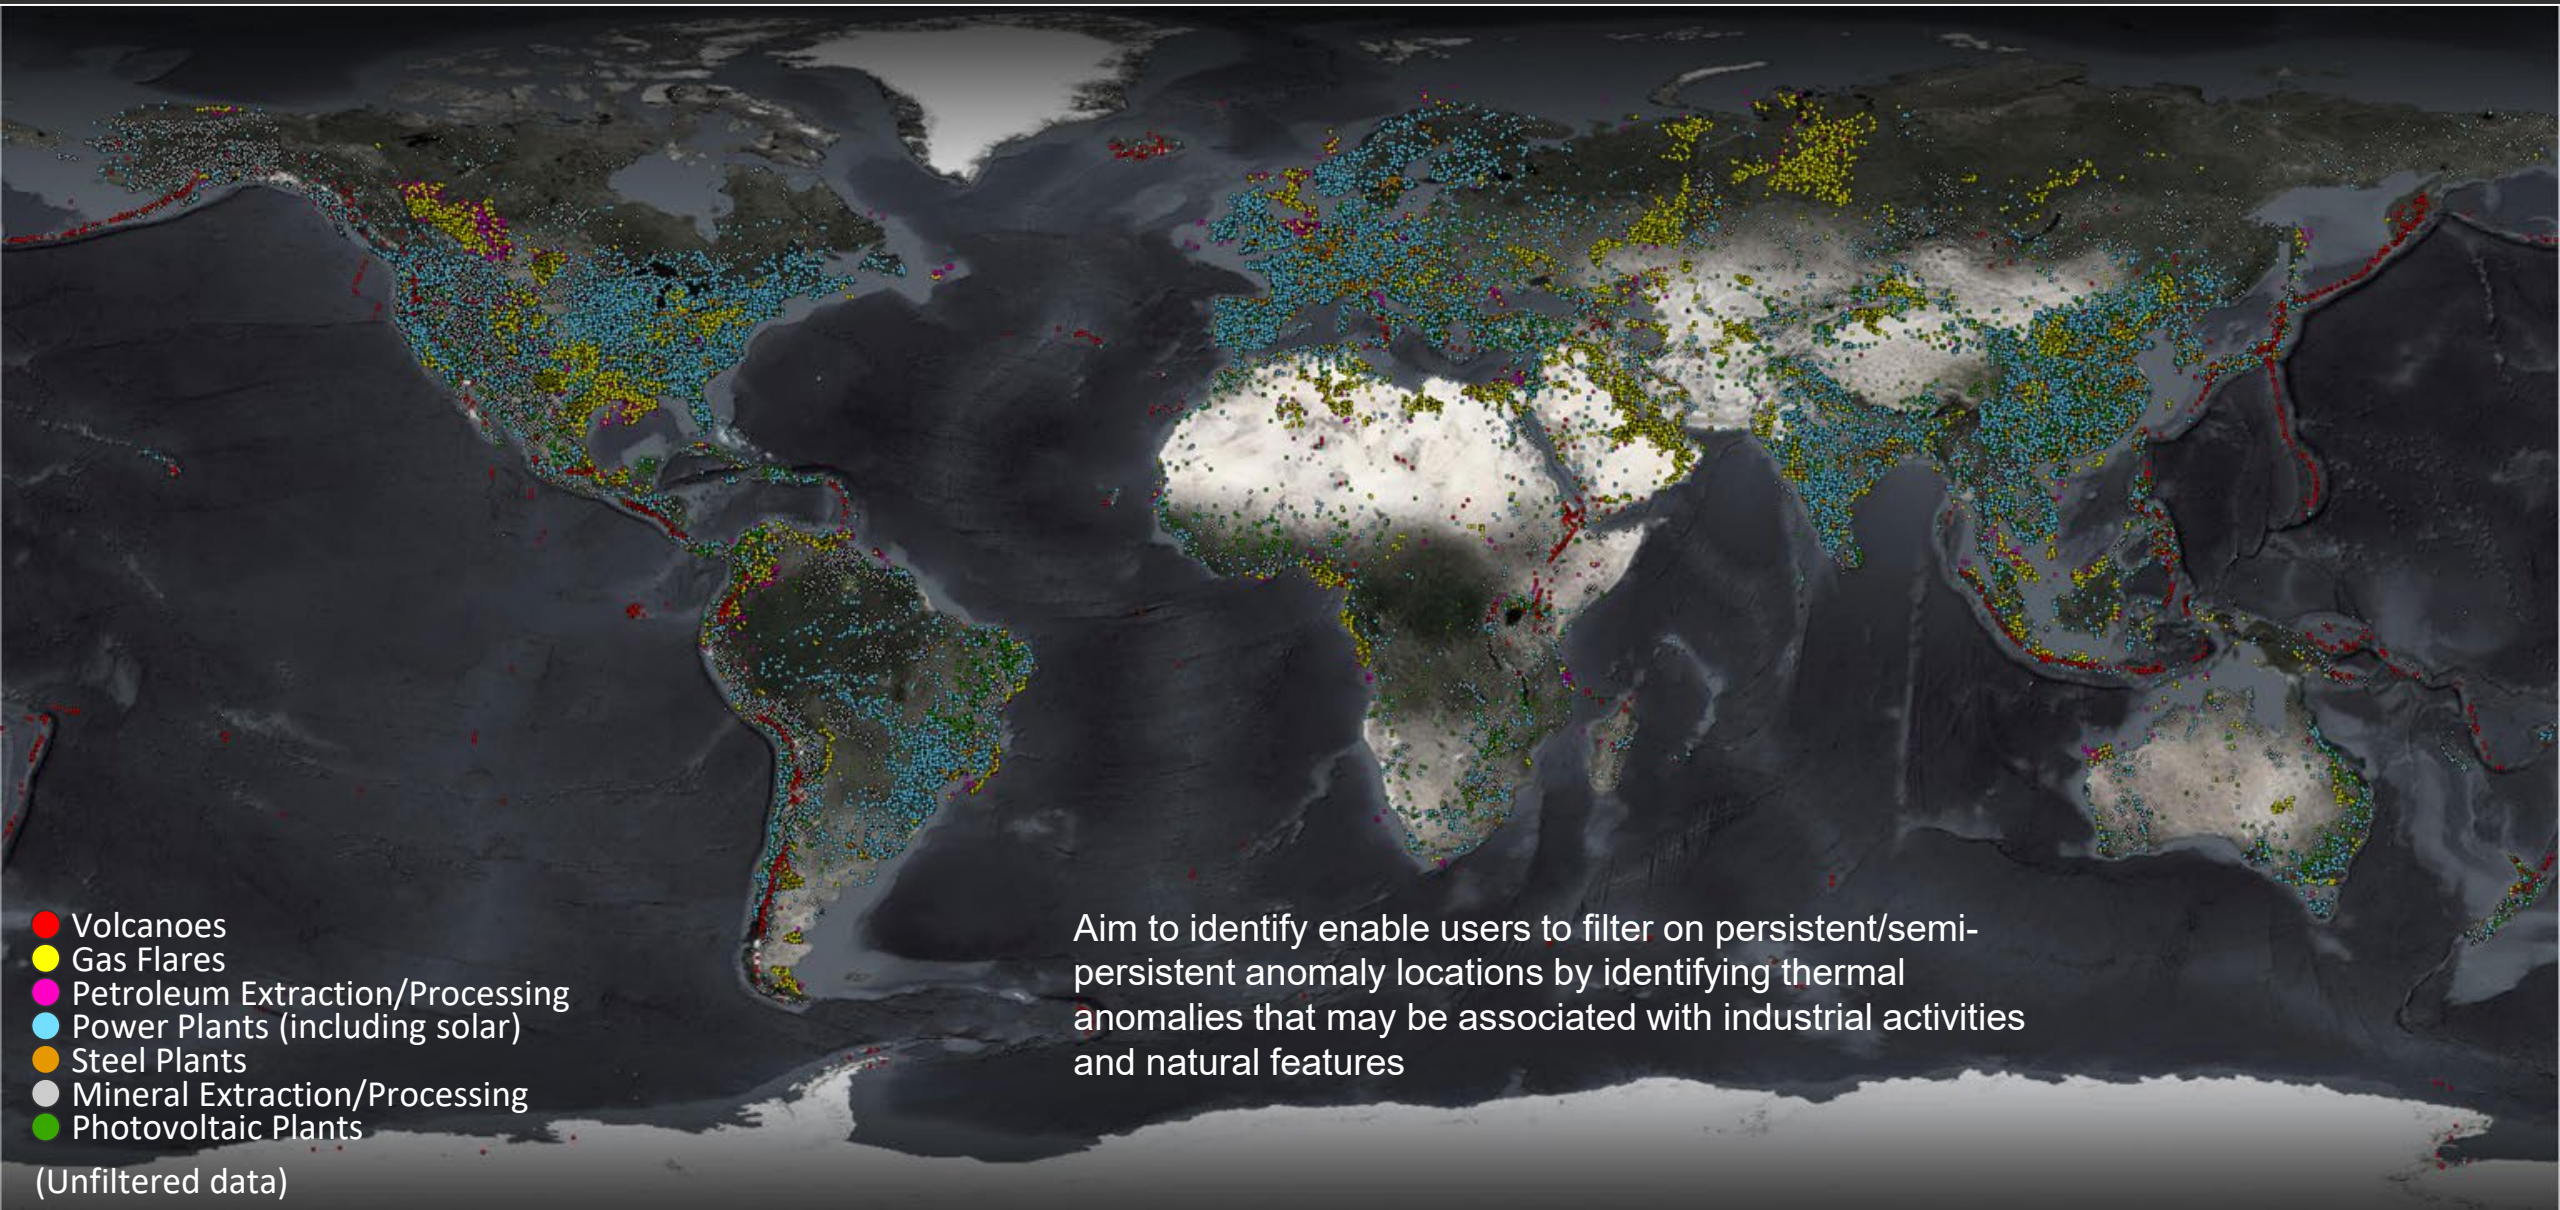

Assess data in context of annual active fire detection data

Identify routinely detected anomaly sources

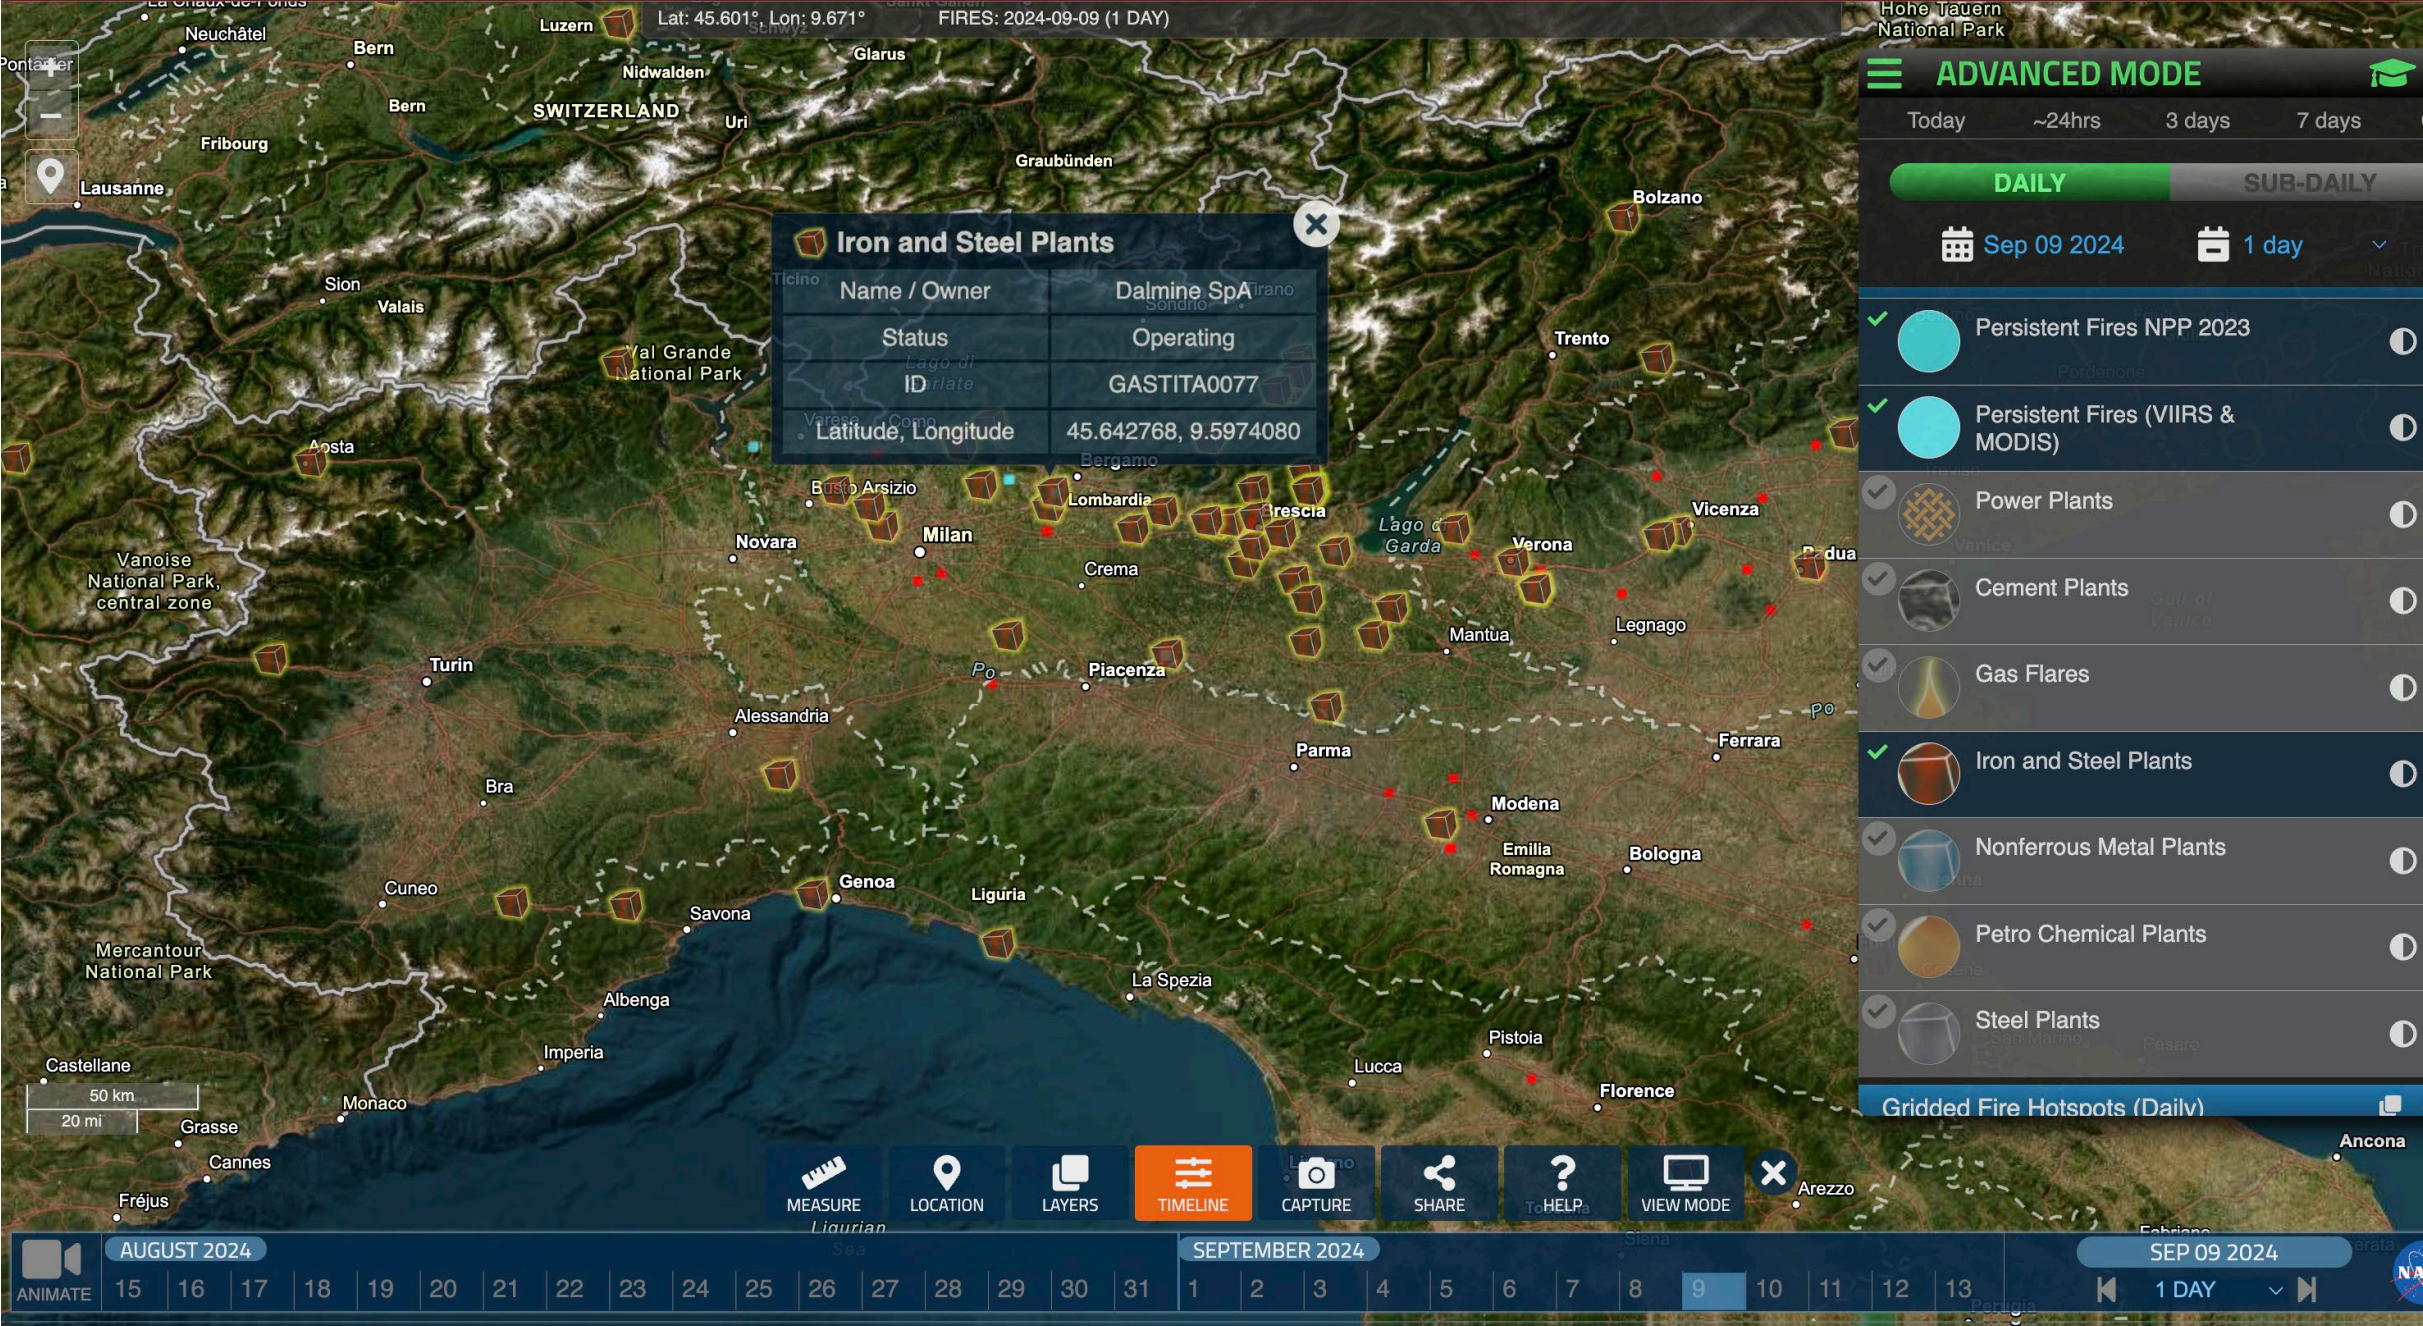

Provide output dataset(s) as reference or to generate value-added data to aid/guide users

# Potential Persistent/Semi-Persistent Anomaly Locations

Gridded Fire Hotspots (Daily)

# Recent Comments by Operational FIRMS Users

Those images (from FIRMS) really demonstrate how your work is critical to everything we do  
Northwest Territories

As local systems failed to fill national system ...so went to FIRMS (and USFS legacy system). Data from FIRMS is mission critical..  
Northwest Territories

I use FIRMS Rapid Alerts A LOT. I have each of our regions entered as an AOI so get alerts on all the detections  
Northwest Territories

Active fire data are mission critical particularly because there is a large land base and a small population... critical first alert tool  
Gov't of NWT

Hotspots are default currency of fire information everywhere – so critical  
Province of British Columbia

I can't tell you how grateful we are to have FIRMS as a resource!  
GIS & Wildfire Technician, NWT

Several weeks in 2023 where they could not fly thermal aerial surveys due to unprecedented situation (so hotspots and multi-spectral was all they had)  
BC Ministry of Forests

7. We get Canadian wildfire data from FIRMS  
National Interagency Coordination Center

It's the first thing I check every morning, of every fire season, while I have morning coffee.  
Wildfire Information Systems  
Parks Canada Agency  
Government of Canada

Use it daily and routinely to brief the NMAC  
National Interagency Coordination Center

Satellite detection programs such as FIRMS and other remote sensing techniques are essential to tracking active wildfires throughout the province of BC during busy fire seasons  
Province of British Columbia

Thank you as well for all the hotspot data, which is ever so useful and which you/FIRMS has been providing for many years  
Natural Resources Canada

Use Fire Map to look at what support is needed, or likely to be needed, internationally (Australia, Argentina, Chile  
NICC

Use Fire Map a lot for situational awareness and to pass to managers  
National Interagency Fire Center
