

Typology Analysis of Land and Forest Fire in Riau Province, Indonesia

Israr Albar^{1,2}

¹Ministry of Environment and Forestry, Indonesia

²Graduate School, Bogor Agricultural University

*International Workshop on Land Use/Cover Change and Air Pollution
Bogor, 4-7 August 2015*

Outline

- Introduction
- Fire Season in Indonesia & Riau
- IFEWS
- Fire Types
- Canal Blocking
- Burned Area
- Remarks

Facts

- Indonesia experiences the world's 2nd highest deforestation rate
- Including one of the largest emitters of greenhouse gasses emission due to: forest cover loss and peatland degradation

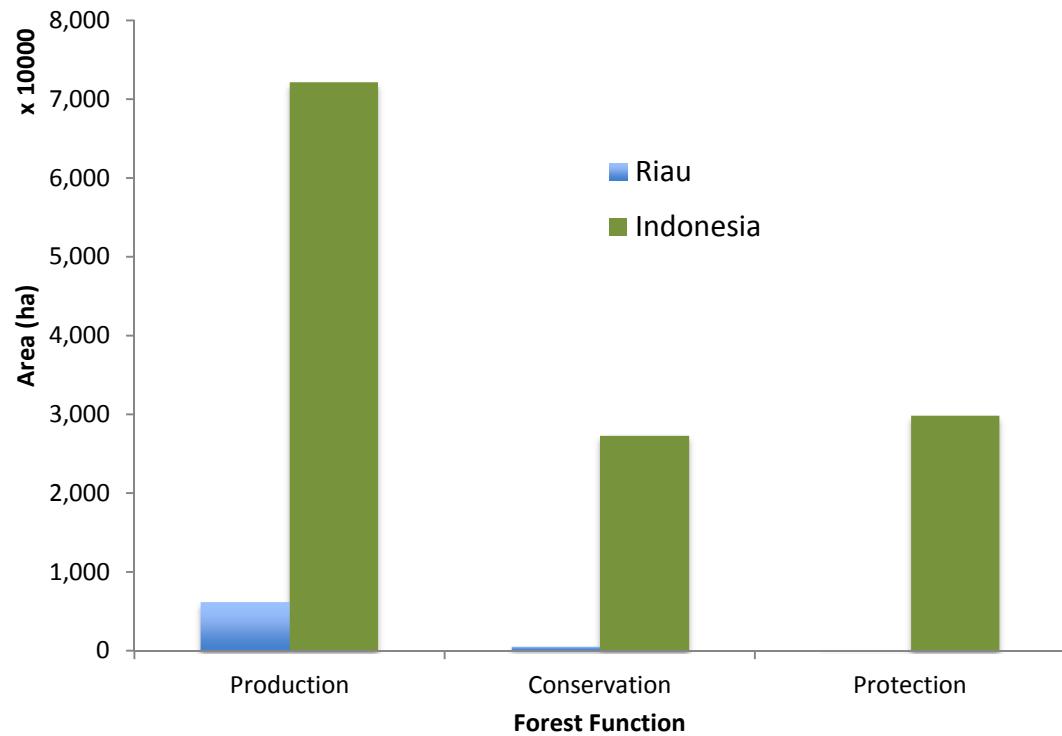

Problems

- Complex and conflicting definition
- Lack of adequate data sets
- Need a robust method
- Insufficient infrastructure for the work at national scale

Consequences

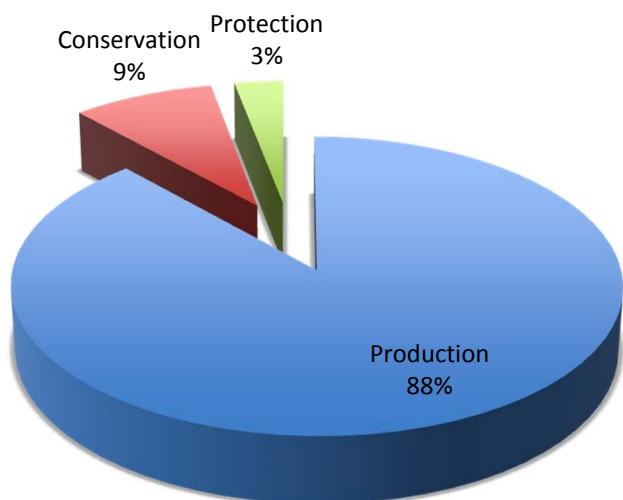

- Cannot provide near real time information
- Lack of consensus for areal extent and temporal trends of forest cover loss

Forest Area in Indonesia & Riau (MoF 2014)

Riau 7.121.344,00
Indonesia 129.425.443,66

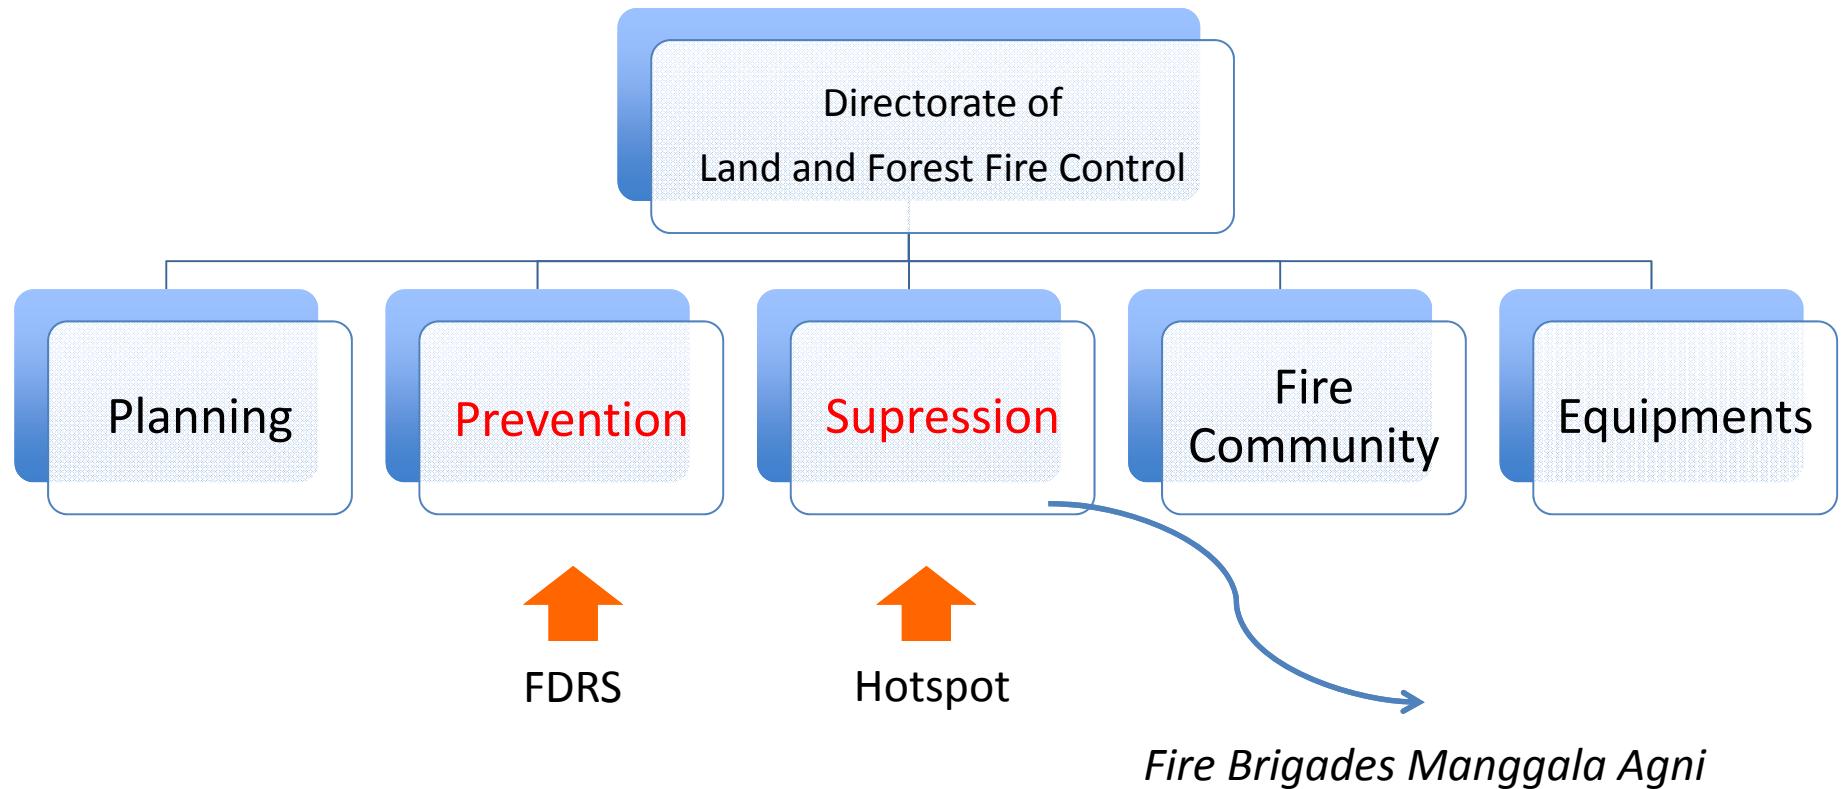

Forest Area in Riau Prov (MoF 2014)

Hotspot in Riau based on Districts

Peatland in Riau Province Total Riau : 8.915.015,09 HA

No	District	Area (Ha)
1	Indragiri Hilir	982.526
2	Indragiri Hulu	222.396
3	Bengkalis	856.386
4	Pelalawan	679.371
5	Siak	503.669
6	Rokan Hilir	453.874
7	Rokan Hulu	50.481
8	Dumai	159.595
9	Kampar	119.775
10	Pekanbaru	5.231
Total		4.033.304

Peat Fire Characteristics

- Peat fires in Riau mostly surface fires : spread fast and consumes surface fuel in short time.
- Deep peat fire (smoldering fires) spread slowly.
- Peat fires may occur after the peat has been drained and under ground water level more than 40 cm.

Peatland Fire vs. Peat Fire

Peatland Fire = Fire on a peat dominated site

Peat Fire = Ground Fire burning in Peat Soil

*surface fires on peatlands lead to peat fires
when peat soil is dry.*

Fire Types

1. Small scale land fire owned by community for a particular planting eg pineapple.
2. Area extention by burning the shrub
3. Encroachment using fire at plantation area
4. Open a new land for plantation
5. Fire at natural forest (conservation area and core zone of biosphete reserves)

Sources of the fires

- Land Conversion
- Drought
- (Illegal) Shifting Cultivators
- Land preparation using fire for forestry and oil palm activities
- Logging

Canal Blocking

There has been a big program call blocking canals in Riau as part of prevention activities. Actually the Government plan to set up 1000 blocking canals in order to re-wetting the peatland. But, the latest proposal is to set up 629 canal blocking in Riau itself.

125 locations already verified to build the canal. But the progress is too slow due to administration procedure.

Under the Ministry of Environment and Forestry, 25 blocking canals in Kepulauan Meranti have just established. Since last March 2015, Riau province stated as 'fire emergency status' till the end of August.

UNDP is also interested in establishing the blocking canal for other location in Riau as well as Jambi province, and July 2015 they start to verify the locations.

Shallow water level at Siak Giam Kecil, Riau, prevented the fire from establishing a deep peat fire. Fires here thus categorized as surface fires on peat. The fires spread quickly and brought high damage severity to the area. The areas were burned at February, 2014.

The development of an appropriate canal will reduce the negative effect of using the peat land. In the reality many of the development of canals did not follow the rules, so the negative effects were occurred, i.e. flooding, disappearance of flora and fauna, increased forest fires, sedimentation and reducing the quality of river (Anwar, 2006)

- Suppression
- Handling of Impact

Manggala Agni : 2.800

Community Fire : 7.308

Remarks

- Peatland fire will be repeatedly occur in Riau. Need a proper policy based on scientific knowledge.
- Surface fires on peatland lead to peat fires when peat soil is dry.
- Development an applicable methodology to measure the burned area (and depth) of peatland fire is very important (eg. for MRV).
- Applicable methods needed to estimate BA regularly

Outlook

- Ground truth at study area (validation)
- Study with BAMS (Burned Area Mapping Software, 2014)
- Compare Landsat Reflectance
